

Python Assignment - 2

1) Input marks and print grade (A, B, C, Fail).
Ans
num = int(input("Enter a number"))
if num % 2 == 0:
 print("Even")

else:
 print("odd")

Print multiplication table for a given number

marks = int(input("Enter a mark"))

if marks >= 90

print('Grade A')

elif marks >= 75

print('Grade B')

elif marks >= 50

print('Grade C')

else:

print('Fail')

2) Print multiplication table for a given number
Ans

num = int(input("Enter a number"))

for i in range(1, 11)

print(f"{num} x {i} = {num*i}")

3)
Ans

Count vowels in a string

text = input("Enter a string:").lower()

vowels = "aeiou"

count = 0

classmate
Date _____
Page _____

for char in text
if char in vowel

count += 1

Print ("Number of vowels: count")

Python Assignment - 2

Q. Explain if, if-else, if-elif-else statements.

Ans. if statement - execute of block code only if the condition is true

if-else statement - execute one block if the condition is true otherwise execute the else block

if-elif-else statement - use when we have more than one condition to check

Q. Difference between for and while loops.

Ans for loops

used when the number iteration is known

used counter variable or 'iterable'

while loops

used when the number of iteration unknown

used a condition that must become false to stop

3) Logical operators examples.

Ans And - True if both condition are true

ex - $x > 5$ & $x < 10$

result

true only if both true

OR - True if atleast one condition is true

ex - $x > 5$ OR $x == 5$

result

True if only one condition is true

True

NOT - Reverse the result

ex - not ($x > 5$)

result

True if $x \leq 5$

4)
Ans

Use of break and continue.

break exit the loop

immediately

ex - ~~for i in range(10):~~
~~if i == 5:~~
~~break~~

output 0, 1, 2, 3, 4, 5, 6, 7

Continue - skip the current iteration
and move to the next

or

```
marks=int(input("Enter a marks"))  
if marks>=90:  
    print('Grade A')  
elif marks>=75:  
    print('Grade B')  
elif marks>=50:  
    print('Grade C')  
else:  
    print("Fail")
```

```
Enter a marks90  
Grade A
```

```
num=int(input("Enter a number"))  
for i in range(1,11):  
    print(f"{num}*.{i}={num*i}")
```

Enter a number65

65* .1=65

65* .2=130

65* .3=195

65* .4=260

65* .5=325

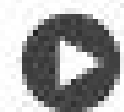

65* .6=390

65* .7=455

65* .8=520

65* .9=585

65* .10=650

```
text=input("Enter a string").lower()
vowels="aeiou"
count=0
for char in text:
    if char in vowels:
        count+=1
print("Number of vowels:",count)
```

```
Enter a string5
Number of vowels: 0
```
